

Lab 07 Final project website

Use your creativity and knowledge of html 5 and css to create a website that is worthy of your portfolio.

The topic/content of your website is up to you, but will need instructor approval.

Your website will contain 4 pages: Home page (index.html), and three other pages of your choice. Include a cohesive navigation system that is consistent throughout the site. It should add to the "branding" of the site and communicate to the user where they are.

1. Create a comp or mock up of your design idea. Due by Week 8
2. GIT commits: minimum of 4 each lab session worked. OR FTP your URL week 8 - 10 in the same assignment spot on PolyLearn.
3. Website folder structure created using web standards.
4. All pages link appropriately.
5. All images saved and optimized!
6. Level of difficulty is commensurate to information learned throughout class.
7. Html & css is commented thoroughly.
8. FTP your final URL

You will submit website progress each week *at the end of lab* You can either use GIT or post your URL each week (yep, you can post multiple times on Polylearn). Make backup copies to your OneDrive/Google Drive.

Week 7 Plan out which website you will design and create a mockup or comp design of the home page and interior. Save each as a PDF or JPEG and submit on Polylearn.

Use git log > progress_report_date_name.txt

Week 8 lab submit: detailed GIT log or URL of progress

Week 9 lab submit: detailed GIT log or URL of progress

Week 10 By the end of week 10, Friday 11:59pm, submit the URL of your website.

****If you pick a subject/company that already has a website, it must be a re-design *improving* upon the current design. Include the existing website with your final files and wireframes when you turn in your final work. **Firefox/Chrome:** File> Save Page As **Format:** web page, complete. **Safari:** File> Save As **Format:** web archive.**

When complete, name your folder 338_section_lastName_final. Include all website files
